EDUCATION

Chitkara University

Rajpura, Punjab

B.E. Computer Science Engineering – Specialization in AI & Machine Learning

2025 – 2029

– Relevant Coursework: Data Structures & Algorithms, Web Development, Artificial Intelligence, Machine Learning, DBMS

PROJECTS

MediQueue | React.js, FastAPI, Supabase

Ongoing

- Built a comprehensive healthcare platform where patients describe symptoms, get matched with verified doctors, and receive appointment slots based on their medical needs
- Designed smart triage flow using FastAPI backend to match patient symptoms with available doctor specializations
- Integrated Supabase for real-time appointment management, authentication, and patient record storage

DevShare | React.js, Node.js, Supabase, Antigravity

Ongoing

- Engineered a social platform for developers to showcase projects, share ideas, and build in public while discovering job opportunities
- Implemented developer profiles, project showcasing, and community feed features using React.js and Node.js
- Leveraged Supabase for database, real-time updates, and user authentication across the platform

Gap to Growth | React, Next.js, FastAPI, MongoDB, TailwindCSS

Feb 2026

- Co-built an intelligent career platform that parses resumes via NLP, maps skills against live job market data, forecasts skill demand trends, and conducts AI-driven mock interviews | Team project
- Designed adaptive learning pathway recommendations using multi-domain skill-gap analysis to guide users toward in-demand career opportunities
- Integrated FastAPI backend with MongoDB for scalable data handling and Next.js frontend for a seamless, responsive user experience

Silent Hunt | HTML, CSS, JavaScript

2025

- Developed an interactive location-guessing quiz game where users identify Chandigarh landmarks using contextual hints
- Implemented a 5-question challenge system with certificate generation upon successful completion
- Built entirely as a full-stack solo project with dynamic UI and score-tracking logic in vanilla JavaScript

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, Python – core languages for full-stack development, scripting, and data processing

Frontend: React.js, TailwindCSS – component-driven UIs and responsive design

Backend: Node.js, FastAPI, Python – asynchronous server logic and high-performance microservices

Databases: Supabase – real-time data sync, and authentication management

AI / ML & Data: RAG pipelines, OpenRouter API, Google Gemini API, Pandas, NumPy – LLM integration and data manipulation

Automation: Make.com – no-code/low-code workflow automation, API orchestration, and multi-step data pipelines across platforms

Vibe Coding & AI Tools: Claude Code, Anthropic API, Antigravity, Cursor – AI-assisted development, prompt-driven coding workflows, and rapid prototyping using LLM-powered dev tools

Cloud & Tools: Git, GitHub, Vercel, Postman, Figma, Streamlit – version control, deployments, API testing, and UI prototyping

ACHIEVEMENTS & CERTIFICATIONS

Hackathons & Competitions

- **1st Place – Envovx Hackathon (Jan 2026)** | Built EnviroSense: an AI-powered green credits web app featuring real-time environmental heat maps and sustainability scoring | 400+ participants | Prize: Rs. 7,000 | Team project
- **Winner – DataLens Hackathon (Mar 2026)** | Developed a premium data engineering platform with Excel-like enterprise spreadsheet, data healing tools, and a live RAG chatbot for real-time contextual dataset insights | Team project
- **Top 10 Finalist – Finvasia Hackathon (Apr 2026)** | Co-built Monager: a passive financial OS for Gen Z with React Native mobile app and immersive 3D web dashboard that auto-organizes money and invests surplus via an AI twin | 100+ competing teams | Team project
- **Participant – Thapar's Makeathon 8** | Competed in Thapar Institute of Engineering & Technology's flagship innovation and hardware hackathon
- **Participant – Startup Sprint (IIT Ropar)** | Pitched early-stage startup ideas and competed in product ideation challenges organized by IIT Ropar's entrepreneurship cell

Roles & Memberships

- **Technical Member – Evolve AI, Chitkara University (Nov 2025 – Present)** | Active member of the university's AI-focused technical society; contributed to building and managing the organization's web platform; developed expertise in Data Science and AI through collaborative projects and workshops | Team project
